About Cornelia de Lange Syndrome (CdLS) and the CdLS Foundation

Cornelia de Lange Syndrome (CdLS) is a genetic condition present at birth, affecting an estimated 1 in 10,000 live births. Researchers believe upwards of 20,000 men, women and children have CdLS but remain without diagnosis and/or support.

The severity of CdLS ranges from mild to severe, but most individuals with CdLS share similar characteristics, such as small stature; joined eyebrows; long eyelashes; upturned nose; and thin, downturned lips. Common medical issues associated with CdLS include severe gastro-esophageal reflux and feeding difficulties; cleft palate; vision problems; hearing loss; seizures; behavioral issues; missing limbs and/or limb differences; and heart defects. Most children with CdLS have some degree of mental retardation. Overall, cognitive and physical development is slowed, while delays in speech and communication are even more pronounced.

The CdLS Foundation, founded in 1981, is a family-support organization that works to promote early and accurate diagnosis of CdLS while raising overall awareness of the syndrome, promoting research into the causes and manifestations of the condition, and assisting individuals with CdLS and their families throughout their lives.

The New England CdLS Charity Golf Tournament

Since 1993, the CdLS Charity Golf Tournament has raised over \$362,000 to help people with CdLS to live better, fuller lives. Inspired by their children affected by CdLS, New England parents and their friends have made the success of their tournament an annual labor of love. After raising \$9,200 in its first year, the CdLS Charity Golf Tournament has grown in success, raising more than \$49,000 in 2009. More than 20 families of children with CLS have been represented throughout the years, including 9 families in 2009.
